SOP-IT-003 · Local by default: what stays in the shop's own browser

SOP IT-003 | Status draft | Changed 2026-11-01 | For The shop and the lab

Department: IT · **ID:** 003 · **Status:** draft (approved when tagged) · **Owner:** the lab · **Last changed:** 2026-11-01

Purpose

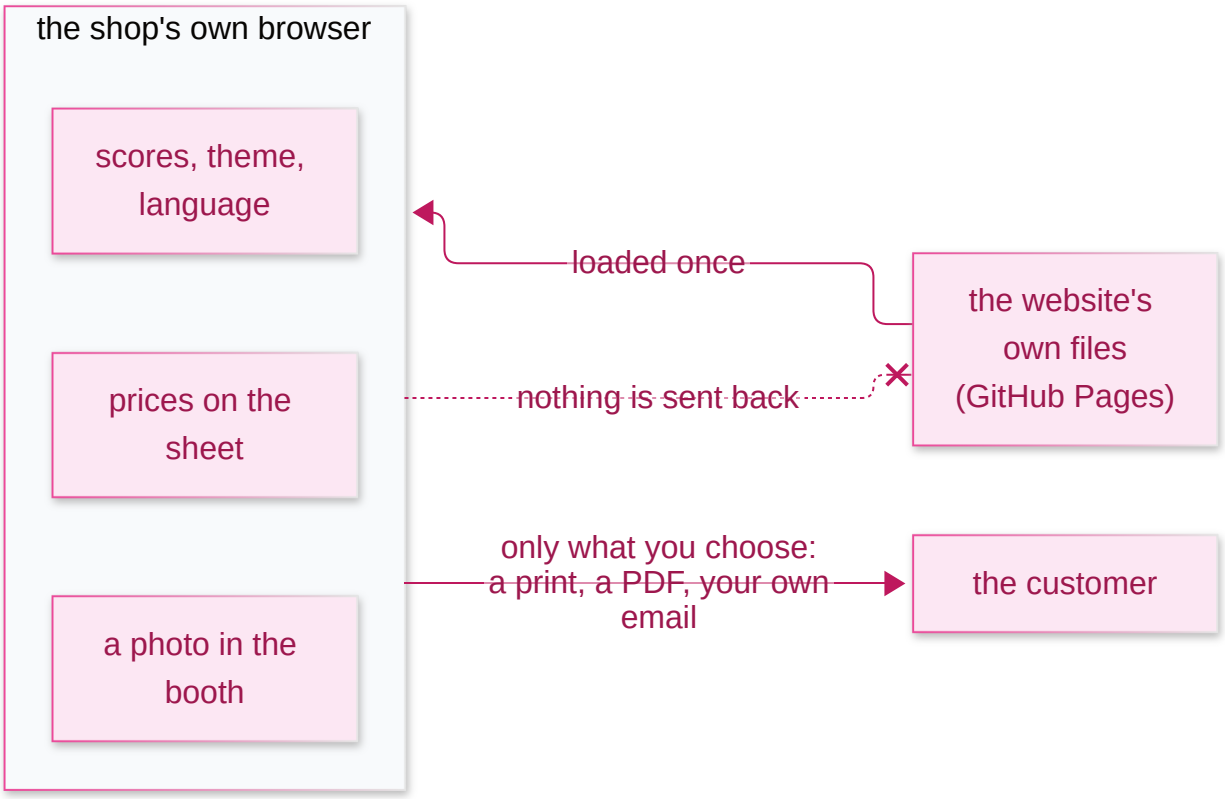

The fleet's rule for anything that runs on someone's machine is *local by default*: it answers only that machine unless someone opens it on purpose. For the shop, the same rule means the websites keep the shop's numbers, photos and choices in the browser that made them, and send nothing anywhere. This procedure says what stays local, how to use it, and what to do when moving to another device.

Scope

Both websites, on any device the shop or its visitors use. Not the shop's own store (taylordwraps.com), which has its own rules.

What stays local

Thing	Where it lives	Sent anywhere?
Prices on the proposal sheet (THE CARPORT `/proposal`)	in the browser you typed them in, and only if you ask it to remember them	**never**; prices never enter the workshop either (`ALLOWLIST.md`)
The Car Show's proposal sheet (`proposal.html`)	nowhere: it is a static sheet; print or save as PDF	never
A photo uploaded to the booth or the visualizer	in that browser tab, for as long as it is open	**never uploaded**; the film is laid on it in the browser
Arcade scores, theme, language, effects	that browser	never; `COPY MY RUN` puts a line on your clipboard, nothing more
Wrap Origin fingerprints	computed in the browser and checked against the site's own list	never
A work order or ticket	ends in a phone call or an email you send yourself	only what you choose to send, to the shop

Steps: the proposal sheet, on the shop's computer

1. Open THE CARPORT's proposal sheet (`/proposal`) on the computer the shop uses at the counter. *You should see:* blank price fields.
2. Type the shop's prices and tick the services; choose to have the browser remember them if you want them next time. *You should see:* the sheet in the shop's colours, with your numbers.
3. Print, or save as PDF, and hand it to the customer. *You should see:* a clean one-page sheet.
4. **Another device** (a tablet, a second computer) starts blank: type the prices there too. Clearing the browser's site data clears them; keep your own copy of the rate card wherever you keep it today.

For the lab: keeping it local

- No analytics, no tracking, no accounts, no forms that post anywhere; a new feature that would send data off the device is a proposal first, never a quiet addition.
- The Carport's build tripwire fails on anything shaped like a price in the source; never weaken it to pass.
- Any dashboard or tool the lab runs for this work on its own machine listens on that machine only (the universal SOP-IT-003).
- The lab's Claude Code sessions run the built-in **You should know** reader (`cc-plugin-you-should-know@builtin`), the second reader that first spelled out the local-by-default rule. It has no tools: a heads-up from it is a reason to check, never a check done, and each check it makes is one extra model request. To know it runs, look for its **Heads up** note in the session; it is turned on with `/plugin enable cc-plugin-you-should-know@builtin` and needs no restart. The full note is in the universal SOP-IT-003 ("Where the heads-up came from").

Verification

With the browser's developer tools open on the network tab, filling the proposal sheet, uploading a photo to the booth and playing a cabinet make no request to any server other than the website's own files.

Troubleshooting

Symptom	Likely cause	What to do
The prices are gone	a different browser or device, private browsing, or cleared site data	type them again; they were never stored anywhere else, by design
The uploaded photo disappeared	the tab was closed	upload it again; nothing was kept
Someone says the website "collected" their details	it cannot: nothing is collected	point them to this page; the shop's store has its own policy

Related

- SOP-IT-002 (reading with no account), SOP-OPS-001 (what the shop never needs to do)
- `ALLOWLIST.md` (prices never in git), `carport/src/app/proposal/`, `carshow/proposal.html`
- The universal SOP-IT-003 in `my-template/sop-template` (observer dashboards, local by default)

Change log

Date	Change	By
2026-10-31	Drafted for the shop from the universal SOP-IT-003: what stays in the browser, the proposal sheet on the shop's computer, the lab's rule	Alfred (FortunaTradesARB session)
2026-10-31	The "You should know" reader noted for the lab (from Christopher's screenshot of its heads-up, via the universal SOP-IT-003)	Alfred (FortunaTradesARB session, review)
2026-11-01	Moved into `taylordwraps/ops-standard-operating-procedures`. Lucid pass: icons, what stays in the browser drawn in Mermaid	Alfred

Part of the fleet's procedures. The master copies and the legend live in my-template.
